SUMMARY

Software engineer specialising in building SaaS products end-to-end — from database schema and backend services to frontend and design system. Currently building internal tooling and automation systems at ChefsRHere, a US-based product company. Equally fluent in engineering depth and product design; most comfortable at the seam between the two.

EXPERIENCE

ChefsRHere — Software Engineer Mar 2025 – Present | Remote (US)

- Built ShipFree, a shipping automation dashboard running in daily production, handling label generation and carrier rate selection across the company's fulfilment operation
- Engineered the backend, API layer, and deployment pipeline for OrderPack, a Shopify-embedded order management tool that replaced a manual warehouse lookup process with a consolidated pick list
- Collaborate with the operations team on platform stability, workflow automations, and ongoing technical problem-solving — sustaining and improving running systems alongside shipping new products
- Work spans Next.js 15, TypeScript, .NET / C#, Azure Functions, Azure Static Web Apps, and Shopify Admin GraphQL depending on the problem

Freelance — Full Stack Developer 2023 – 2025 | Dhaka, Bangladesh

- Built Therapy Station ERP, a solo project replacing a paper-based physiotherapy clinic's full operation — scheduling, patient records, billing, and audit trail — with a live Next.js and Supabase system
- Designed, built, and deployed web projects end to end for small businesses: redesigns, brand sites, and custom platforms
- Covered the full stack on every project: design, frontend, backend, and deployment — no handoffs

NSU Startups Next — Technical Support Specialist Intern Jan 2024 – Mar 2024 | Dhaka, Bangladesh

- Improved website performance and user experience through targeted feature improvements
- Collaborated across departments to align technical changes with business goals; provided documentation to ensure smooth handovers

SELECTED PROJECTS

ShipFree Next.js 15 · TypeScript · .NET / C# · Azure Functions · UPS API · Shopify GraphQL

Shipping automation dashboard for a US-based fulfilment operation. Handles carrier rate selection, label generation, and order tracking in a single workspace. Full-stack ownership from schema to deployment.

OrderPack Node.js · Express · PostgreSQL · Shopify Admin GraphQL · JWT

Shopify-embedded order management tool. Turns a paste of order numbers into a consolidated warehouse pick list with PDF export. Backend, API design, and deployment by me; frontend by a team member.

Therapy Station ERP Next.js 13 · TypeScript · Supabase · Tailwind CSS · shadcn/ui

Greenfield clinical ERP replacing a fully paper-based physiotherapy clinic's operation — scheduling, patient records, billing, inventory, and tamper-proof audit trail. Solo build, design to deployment.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C# (.NET), PHP

Frontend: Next.js, React, Tailwind CSS, shadcn/ui, Framer Motion, View Transitions API, Bootstrap

Backend & Data: Node.js, Express, Django, Supabase, PostgreSQL, MongoDB, MySQL, Azure Functions

Platforms & APIs: Shopify Admin GraphQL, UPS API, Azure Static Web Apps, Vercel, GitHub Actions

Tools: Git, Figma, Photoshop, Illustrator

EDUCATION

BRAC University — Dhaka, Bangladesh CGPA: 3.55 | Jan 2020 – Jun 2024

BSc Computer Science & Engineering
